

## EDITORIAL

Dear Readers,

We would like to use CAMLOG News in the future to inform you at regular intervals about new developments in our company.

Through the camlog foundation and the camlog academy – founded this past May – we are providing our partners in the dental office and lab with an international network to promote sharing of experiences.

Jürg Eichenberger

One milestone we reached was the 1st International CAMLOG Congress in Montreux, Switzerland. Over 750 visitors came together from all parts of the world

for the first time to participate in a great "CAMLOG Family Event."

CAMLOG will in the future make substantial contributions to the development of the field of oral implantology through its steadily growing research and development department. The Promote® plus design is just one example of the latest developments at CAMLOG.

I invite you cordially to get to know us and get to know about CAMLOG.

Best wishes,

Jürg Eichenberger  
CEO  
CAMLOG Biotechnologies AG

First Chairman of the Foundation: Prof. Dr. Dr. Rolf Ewers

### camlog foundation

## Science to serve the patient

**To be different than the competition – this is what the newly created camlog foundation represents. It was described in the course of the First CAMLOG Implant Festival (Montreux from May 11–13, 2006) as „an investment of a quite different order“ by the chairman of the foundation board Prof. Dr. Dr. Rolf Ewers, Vienna.**

The **camlog foundation** has dedicated itself to supporting progress in implantology and allied fields for the benefit of the patients. It will do this through creation and promotion of new knowledge. In practice, it will support young gifted scientists in their work. Projects in basic and applied research will be supported. Advanced and continuing education is another focus for the work of the **camlog foundation**. Here every resource will be fully exploited, such

as lectures, seminars with hands-on courses and live clinical demonstrations, as well as surgical partnerships. The scientific program includes scientific exchanges between universities and industry, particularly in the field of clinical research and teaching.

All users can register and become part of the organized activities of the **camlog academy** attached to the Foundation. The Academy is open to professionals in science, dentistry, oral surgery, maxillofacial surgery, medicine, and dental technology, and should become the base for an „international network.“ Membership in the **camlog academy** is free.
