October 2009

3rd International CAMLOG Congress, Stuttgart, June 10–12, 2010 - From science to innovations and clinical advances

The CAMLOG® Implant System celebrates its 10th birthday this year. Despite this relatively short time, CAMLOG has already set new standards in terms of reliability, treatment, and versatility – its world-wide success continues and grows.

After the widely acclaimed International CAMLOG Congresses in Montreux (2006) and Basel (2008), the 3rd International CAMLOG Congress will be held in 2010 in Stuttgart. This region is the home of many important companies such as Bosch, Mercedes-Benz, and Porsche and is considered to be a center of traditionally high quality awareness and distinctive technical imagination.

The choice of Stuttgart as the venue has not been coincidental – rather, this has had much to do with its strong affinity to fundamental CAMLOG principles.

The 3rd International CAMLOG Congress will begin with theoretical and practical workshops regarding up-to-date topics such as template-guided implant dentistry, 3-D planning, CAD/CAM technology, and procedures for optimization of soft-tissue management.

Internationally acclaimed speakers including scientists and practicing dentists will hold lectures about the “state of the art” in implant dentistry. The topics of discussion will include advances in implant dentistry as well as indications for standard and platform switching procedures. One subject that will receive particular consideration is practice-relevant innovations in the area of surgical implant bed preparation and complication management.

Prosthetic procedural methods and technical solutions and their various facets will be another focus of the lectures. The scientific program will be complemented by a presentation of current research projects. In our “meet the experts” session, we will offer the opportunity for in-depth discussions between the audience and the lecturers.

And to make certain that networking among colleagues will not be cut too short, we will be hosting our traditional CAMLOG Party on the evening of June 11th in a festive atmosphere.

Those who are not only enthused for implant dentistry, but perhaps also for automobile history and technology, can round off their Congress participation with a trip to the world-wide unparalleled Mercedes-Benz and/or Porsche museums.

There are truly more than enough reasons to already mark your calendar and save the date for the 3rd International CAMLOG Congress in the Stuttgart Liederhalle. Registration possible at: www.camlogcongress.com

The **camlog foundation** is a foundation established by scientists under Swiss law. It engages in targeted supporting of gifted young scientists, promotion of basic and applied research, and continuing training and education to promote progress in implant dentistry and related fields to serve the patient. As part of its scientific mission, the **camlog foundation** has assumed patronage of the International CAMLOG Congresses, which take place every two years.
